## Full Stack Developer

### Summary

Web developer and data analyst with extensive project management experience in the tech industry. Full stack web development certification from the University of Texas at Austin including technologies such as JavaScript, Node.js, and responsive HTML/CSS. I currently use Python and SQL on a daily basis to help guide management's decision making for my team at Indeed. Our largest achievement this year has been releasing our product to 17 countries to 100% of our users in those markets. This project required contributions from 160 people on various internal and external teams. I was responsible for executing all deliverables for the Spanish & Portuguese speaking markets (Mexico, Spain, Peru, Brazil). We delivered 24 hours before our due date. I'm looking forward to driving more impact by directly contributing to website functionality for end users on new and exciting products.

### Current Role: Data Analyst - Indeed

Austin, TX

### Work Experience

#### Data Analyst

Indeed - Austin, TX

December 2017 to Present
